

Research Shows Beable's Strong Impact on Literacy Growth

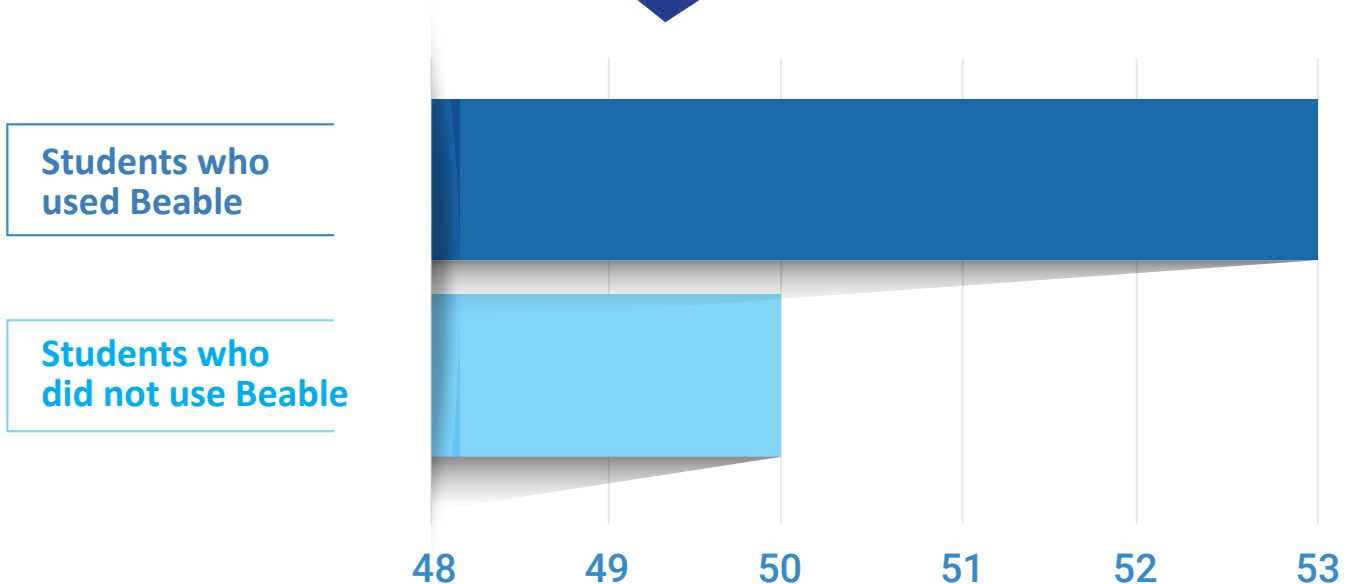

Beable Awarded ESSA* Level II

Independent, third-party research has found that students who used the Beable Life-Ready Literacy[®] platform scored significantly higher in reading than those who did not. The study, conducted by LearnPlatform by Instructure, established that Beable meets the evidence of effectiveness requirements for ESSA Level II.

The study was conducted among 11,065 students grades 2-11, spanning 27 schools and representing diverse demographic groups including English Language Learners, Hispanic, White, Special Ed, and Free and Reduced Lunch Eligible students from suburban and urban areas.

The research showed that on average, students who used Beable scored 3 percentile points higher in reading than students who did not use Beable.

Regression study findings: Students who used Beable performed 3% higher

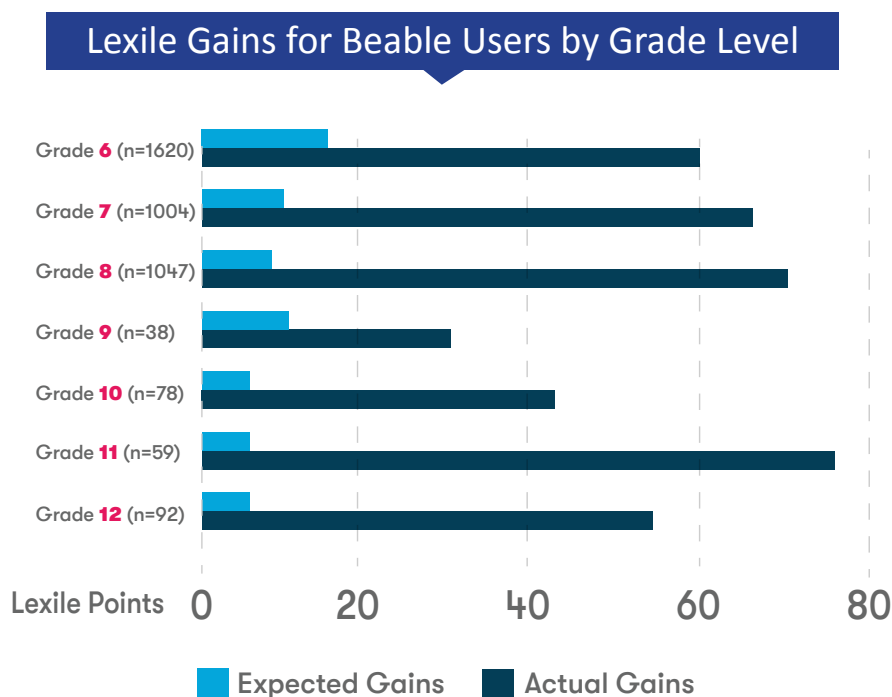

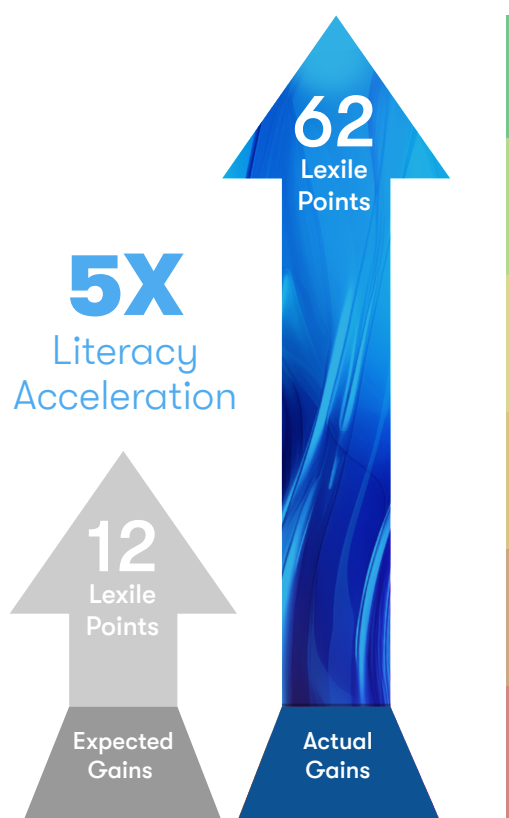

*ESSA (Every Student Succeeds Act) was designed to give all students access to an education that prepares them for their futures through evidence-based practices. The results of this study provide evidence that Beable has a significant effect on improving student outcomes.

Additional Evidence of Beable's Efficacy

Up to 5X Lexile Growth

The third-party study and ESSA Level II certification confirm Beable's own data findings. Beable conducted an efficacy study of 3,938 middle and high school students across five school districts nationwide, including ELLs and students in intervention programs. Using MetaMetrics's widely used benchmarks for expected annual Lexile growth, the analysis showed that students using Beable benefited from Lexile gains more than five times greater than expected annual growth, gaining an average of 62 Lexile points (compared to expected gains of 12 points).

Students across all the grade levels studied experienced Lexile gains far greater than expected. Gains above norms were highest in grades 10-12. Students completing more Beable reading lessons experienced even greater gains, surpassing their peers by 15 Lexile points (24%).

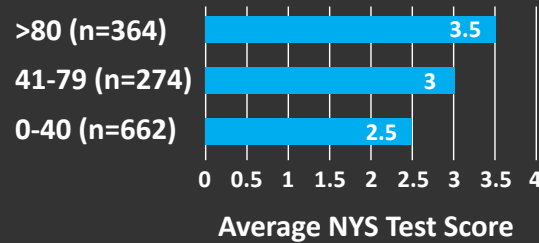

High-Stakes Test Proof Point: NYC Public Schools

A flagship Beable implementation at a New York City Middle School shows that students using Beable with the recommended frequency perform better on state tests. The analysis showed that the more Beable lessons students completed, the higher their NYS test scores. Students completing 80 or more Beable lessons (2x weekly usage) achieved the highest scores on their state exams, obtaining an average score of 3.5 out of a possible 4.5.
